\$1,000 may soon get you to space

SUBMIT

BY ELIZABETH SEGRAN

1 MINUTE READ

[Scientists at Arizona State University](#) are working on technology that will reduce the cost of launching spacecraft to prices we have never yet seen: \$1,000 will get your project to a space station and \$3,000 will get it to Low Earth Orbit. [Dr. Jekan Thanga](#), who is leading this research, explains that his team wants to make space accessible to anyone, including, say, middle schoolers who want to launch a satellite into space for a school project. The scientists are also building the platform on an open standard to allow anyone to start tinkering with their own low-cost launch systems. Read more about it [here](#).
